

Make text easier to read

Small changes for a more comfortable screen.

- 1.** Open Settings on your phone or tablet. Use its search box to look for text size or font size. Names vary by device.
- 2.** On iPhone, try Settings > Accessibility > Display & Text Size > Larger Text. Move the slider a little at a time.
- 3.** Open a familiar message to check the result. Try bold text if available. Some apps have their own text settings.
- 4.** On a computer, use the browser menu to increase Zoom. On CyberGuardia, select Text size for reading controls.
- 5.** Keep the size that feels comfortable. If buttons become hard to reach, reduce it one step or ask someone you trust for help.
